

APPLICATION STACK MANAGEMENT BUNDLE

Fully Functional for 30 Days

Contextual visibility into performance issues from applications to storage

Get a detailed view and more control of your entire application stack, at a glance.

The Application Stack Management Bundle contains four integrated SolarWinds® products: SolarWinds Server & Application Monitor, Virtualization Manager, Storage Resource Monitor, and Web Performance Monitor. Application Stack Enabled Products integrate with each other and have the ability to correlate relationships, resources, and metrics across products and a common dashboard view – the Application Stack Dashboard. Each product in the bundle provides the Application Stack Dashboard, and as additional products are added to a company's environment, the dashboard is automatically populated with the status and relationship information specific to the added product. For instance, if you have Server & Application Monitor, you'll be able to see the relationships and status of applications, and server performance. When you add Virtualization Manager, the dashboard will automatically populate to show the relationships between applications, servers, virtual machines and datastores.

With the SolarWinds' Application Stack Management Bundle, your entire infrastructure team can have end-to-end visibility of their environment and performance. Your team can easily identify trouble areas at a glance using an automatic map showing how these infrastructure layers relate to one another. They can also use this map to perform impact analysis.

APPLICATION STACK MANAGEMENT BUNDLE AT A GLANCE

The Application Stack Management Bundle provides:

- » End-to-end visibility across various technology silos
- » Support for multiple technology vendors
- » Pre-built integration, including automated and contextual visibility that extends management across apps, database, server, virtual layer, and storage infrastructures
- » Quick and easy setup and customization. Add the dashboard to your NOC view in no time

APPLICATION STACK ENABLED PRODUCTS

The Application Stack Dashboard is available with every product in the SolarWinds' systems management portfolio—Server & Application Monitor, Virtualization Manager, Storage Resource Monitor, and Web Performance Monitor. Each product adds information to the Application Stack dashboard. As you monitor more of your environment, you are able to directly see how infrastructure resources impact application performance.

Server & Application Monitor

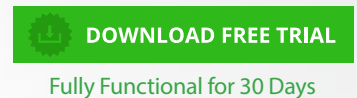

- » Comprehensively monitors the health and status of multi-vendor server hardware and hundreds of applications out-of-the-box including SQL Server®, Exchange, IIS, Active Directory®, and more. See a list of supported applications [here](#).
- » Proactively manage IT hardware and software assets with built-in IT asset management capabilities.
- » Monitor the availability and high-level CPU and memory of VMware® and Hyper-V® hosts and virtual machines to provide basic statuses.

Virtualization Manager

- » Performance monitoring, capacity planning, configuration, VM sprawl detection, VDI, and chargeback for troubleshooting and optimizing a VMware or Hyper-V environment.
- » Alerts about configuration issues and performance problems across virtual clusters, hosts, and datastores.
- » Uses baseline thresholds to alert on performance discrepancies on clusters, hosts, VMs, and datastores.

Storage Resource Monitor

- » Real-time storage performance visibility into heterogeneous SAN and NAS arrays.
- » Storage monitoring capabilities for LUNs, disks, storage pools/RAID groups, storage arrays.

- » Comprehensive alerting and reporting capabilities for reporting on configuration and asset information, storage grouping, etc.
- » Multi-vendor array support for most major storage vendors including EMC®, NetApp®, Dell®, and LSI arrays.

Fully Functional for 30 Days

Web Performance Monitor

- » Monitoring of user experience and overall performance of websites and Web applications
- » Detailed information about website load times, front-end components, user experience for complete transactions, page load speeds by location, heavy page elements, etc.
- » Agentless and secure user experience testing from multiple locations inside or outside your firewall.

Application Stack Management Bundle Deployment Guide

For more information about solution prerequisites, technical specs, configuration, and customization, please see the [Application Stack Management Bundle Deployment Guide](#).

TRY BEFORE YOU BUY. DOWNLOAD A FREE TRIAL!

Don't just take our word for it. At SolarWinds, we believe you should try our software before you buy. That's why we offer free trials that deliver full product functionality. Simply download and install the software, fire up auto-discovery, and take a break while SolarWinds systems products discover your servers, apps, arrays, and VMs. When you get back, your Application Stack Management Bundle will be waiting for you—complete with out-of-the-box dashboards, alerts, reports, and more! It's that simple!
